

January 2022

**Knowledge is power!**

**Kaeser launches its Webinar Programme for 2022**

**Kaeser Compressors Australia has launched its Webinar Programme for 2022. This programme includes the return of the popular ‘Compressed Air Webinar’, as well as a new series of compressed air focused webinars being run in partnership with Engineers Australia.**

Kaeser Compressors is committed to supporting the compressed air industry with training and education, firmly believing that knowledge really is power when it comes to operating a reliable, dependable and energy efficient compressed air system. As Peter Eckberg, Managing Director of Kaeser Compressors Australia said: ‘Providing compressed air reliably and efficiently at the required quality is a complex process and requires careful consideration of the complete compressed air supply system. The widest possible knowledge base is therefore required in order to properly assess the various interactions within the system and its integration into the operational environment.’

For that reason many years ago Kaeser developed the Compressed Air Seminar. This traditional face-to-face event required delegates to dedicate a full day away from the office. However the remastered and online version which Kaeser launched last year - ‘The Compressed Air Webinar’ - is conveniently run online and at lunchtime.

‘The response to our inaugural webinar programme last year was very encouraging, and it was clear that whether or not COVID-19 restrictions allowed us to return to face-to-face events in 2022, many of our end users have grown to prefer the webinar medium, which presents to them a much more convenient way to tap into such resources.’

R E L E A S E

The Compressed Air Webinar has been specifically developed to provide a solid compressed air knowledge base for all those involved in the planning, installation, operation and maintenance of compressed air supply systems.

The complete Compressed Air Webinar is broken down into three 90 minute modules, that are held online and over three consecutive weeks. From the fundamental principles of compressed air to compressed air treatment, regulations and control systems - the Compressed Air Webinar from Kaeser, provides participants with the knowledge that can ultimately assist them in optimising the reliability and energy efficiency of a compressed air system.

The Compressed Air Webinar is scheduled to run in May and September 2022. Registrations are now open - just visit [au.kaeser.com](http://au.kaeser.com)

## The Webinar Series

Kaeser is delighted to announce that it is once more partnering with Engineers Australia in 2022, to deliver a number of compressed air focused webinars.

Eckberg commented: 'These webinars were extremely well attended in 2021 and we are looking forward to launching our new programme of webinars in partnership with Engineers Australia in early 2022. We've taken on board the feedback from the engineers that attended our previous webinars, and we're currently working on the 2022 series that will tackle some of the specific topics highlighted to us to be of high interest.'
